

How to get started with the example code?

- 1) Install a python distribution. For Windows use [anaconda](#), for Linux use [conda](#).
- 2) [Create new conda environment](#) for webinar e.g “wmo-webinars”
- 3) Install a git client.
- 4) Checkout the git repository from github
“git clone <https://github.com/kurt-hectic/wmo-api-webinar.git>”
- 5) Startup the new conda environment and change into the directory of the downloaded repository
- 6) Install required libraries “pip install -r requirements.txt”
- 7) Startup jupyter notebook “jupyter notebook”
- 8) [Open and run](#) example notebook of choice
