

CDP (?) post Congress

1. Challenge: Very wide/general TORs (both CDP and ETs) and risk of bias of activities/overlaps with activities elsewhere*

(*arguably a little easier from education side, as some ongoing activities from previous Panel taken forward e.g. BIP-M)

Opportunities?

- Gap analysis regarding **key things that could add value** (pre CDP-7, to be discussed at CDP-7?) to inform TORs. **What are we overlapping with being done elsewhere in WMO? Is there a gap and, if so, what is it e.g. coordination?**
- Review TORs in advance (CDP-7?)
- Review as part of TORs how CDP (and other Panels) decide on focus (i.e. other SC/ETs under Commissions are focussed on Decisions at meets, we only had two recommendations from EC)?
- Include consideration of 'significant' initiatives across WMO where we may add value e.g. EWFA, SOFF, WMO SP/OP, data policy?
- Review ETs required (CDP-7?). Could these be combined e.g. 1 team for education/one team for wider CD with more specific TORs which may help with resourcing?
- Look at feedback from other Panels to help inform way forward

2. Challenges: Lack of resource to implement/cross over of teams

(*arguably a little easier with ET-TD as commissions/Boards collaborated with once engaged)

Opportunities?

- Review ETs required (2 instead of 4?)
- Clearer TORs should assist
- Expand team/orientate projects towards interests
- Expectations of team explained in advance

3. Challenge: Communication via Moodle – lack of active participation

4. Challenge: Timing of meets
