

WMO Binary Codes and data conversion tools in the wis2box

WMO Binary codes

BUFR (Binary Universal Form for the Representation of meteorological data)

- a flexible binary format
- mainly used to encode **in situ and satellite observations**
- can also represent forecast data (e.g. tropical cyclone tracks)

GRIB (General Regularly-distributed Information in Binary form)

- designed to encode data produced by **numerical weather prediction** models.
- can also represent observations, but on a regularly distributed coverage

WMO Binary Codes: BUFR

How BUFR Works:

- **BUFR message** consists of a **header** and a **body containing data and metadata**.
- **BUFR descriptors** define how data is structured and encoded within a BUFR message
- **Compression for efficient storage** to reduce transmission times.

BUFR Table System

BUFR descriptors are stored in **BUFR Tables** (Tables A, B, C, and D).

- **Table B** contains all **element** **descriptors** with their definitions.
- **Table D** defines **combinations of descriptors** into predefined **sequences**

BUFR tables are part of the **WMO Manual on Codes**:

<https://library.wmo.int/idurl/4/35625> new version is released **every six months**

recipe

SECTION 3

```
301051 004006 007002 010004
012001 011001 011002 011031
011032 011033 020041
```

Contains a list of six digit descriptors in the form **F-X-Y** → **0-04-006**
Descriptors starting with

F=0 are elements listed in **Table B**

F=1 denote replication of descriptors

F=2 are operators acting on descriptors

F=3 are sequences of descriptors listed in **Table D**

SECTION 4

```
010010101110101001010101010
101000100010101010001010100
101001010100100101001001010
01010101111000010101001001
```

ingredients

Contains the encoded values as a **bit stream** which can be decoded

- Implementing the decoding regulations and notes
- Using the Tables

Made for machines, not humans !

<https://confluence.ecmwf.int/display/ECC/ecCodes+Home>

ecCodes is a package developed by ECMWF which provides an application programming interface and a set of tools for decoding and encoding messages in the following formats:

- WMO FM-92 **GRIB** [edition 1](#) and [edition 2](#)
- WMO FM-94 **BUFR** [edition 3](#) and [edition 4](#)
- WMO GTS [abbreviated header](#) (only decoding).

ecCodes BUFR tools

<https://confluence.ecmwf.int/display/ECC/BUFR+tools>

bufr_dump (JSON or flat dump of the BUFR content)

bufr_filter (a simple filter to modify and print values)

bufr_compare (to compare two BUFR files)

bufr_copy (selective copy of BUFR messages)

bufr_get (get values from a BUFR file)

bufr_set (set values in a BUFR file)

bufr_ls (list the content of the header of BUFR messages in a file)

BUFR tools in wis2box

‘wis2box-api’ container is based on a Docker image containing [ecCodes](#) software library ... and also contains several BUFR-conversion tools that work with ecCodes

BUFR tools used within wis2box-api available to be used standalone:

<https://github.com/World-Meteorological-Organization/csv2bufr>

<https://github.com/World-Meteorological-Organization/synop2bufr>

<https://github.com/World-Meteorological-Organization/bufr2geojson>

CSV-to-BUFR introduction

wis2box contains a built-in data-plugin for “CSV data converted to BUFR”

- Enables ingesting data in CSV format while publishing WIS2 notifications containing BUFR data
- Uses a mapping template to map input columns to BUFR codes

csv2bufr-transformation is provided by the ‘csv2bufr’ module that can also be used outside of the wis2box
<https://github.com/wmo-im/csv2bufr>

CSV-to-BUFR key ingredients

BUFR mapping template

Template: JSON file defining mapping between columns in the input CSV data to codes encoded in the output BUFR data

... using the human-readable eccodes_key rather than the 6 digit BUFR FXXYYY code

```
"data": [
```

```
....
```

```
{ "eccodes_key": "#1#nonCoordinatePressure", "value": "data:station_pressure", "valid_min": "const:50000", "valid_max": "const:150000"},  
{ "eccodes_key": "#1#pressureReducedToMeanSeaLevel", "value": "data:msl_pressure", "valid_min": "const:50000", "valid_max": "const:150000"},  
{ "eccodes_key": "#1#nonCoordinateGeopotentialHeight", "value": "data:geopotential_height", "valid_min": "const:-1000", "valid_max": "const:130071"},  
{ "eccodes_key": "#1#heightOfSensorAboveLocalGroundOrDeckOfMarinePlatform", "value": "data:thermometer_height", "valid_min": "const:0", "valid_max": "const:655.35"},  
{ "eccodes_key": "#1#airTemperature", "value": "data:air_temperature", "valid_min": "const:193.15", "valid_max": "const:333.15"},  
... ]
```

Data CSV file

BUFR Mapping template

csv2bufr

BUFR file(s)

BUFR mapping template

valid_min: Minimum tolerable value

valid_max: Maximum tolerable value

csv2bufr uses 'valid_min' and 'valid_max' to catch input errors: invalid values will not be encoded in the BUFR

```
"data": [
```

```
....
```

```
{ "eccodes_key": "#1#nonCoordinatePressure", "value": "data:station_pressure", "valid_min": "const:50000", "valid_max": "const:150000"},  
{ "eccodes_key": "#1#pressureReducedToMeanSeaLevel", "value": "data:msl_pressure", "valid_min": "const:50000", "valid_max": "const:150000"},  
{ "eccodes_key": "#1#nonCoordinateGeopotentialHeight", "value": "data:geopotential_height", "valid_min": "const:-1000", "valid_max": "const:130071"},  
{ "eccodes_key": "#1#heightOfSensorAboveLocalGroundOrDeckOfMarinePlatform", "value": "data:thermometer_height", "valid_min": "const:0", "valid_max": "const:655.35"},  
{ "eccodes_key": "#1#airTemperature", "value": "data:air_temperature", "valid_min": "const:193.15", "valid_max": "const:333.15"},  
... ]
```

Data CSV file

*air_temperature
value=29.5*

BUFR Mapping template

csv2bufr

*WARNING: Value (29.5) out of valid range
(193.15 - 333.15); Element set to missing*

BUFR file(s)

The AWS template

AWS Template:

Standardized CSV format to ingest data from Automatic Weather Stations in support of GBON reporting requirements

The format is intended for use with automatic weather stations reporting a minimum number of parameters, including pressure, air temperature and humidity, wind speed and direction and precipitation

Based on SI units, with no unit prefixes, e.g. Pa rather than hPa, Kelvin rather than degrees Celsius etc

Template = AWS in the Plugin Configuration

SAVE

The DAYCLI template

DAYCLI Template:

Standardized CSV format for converting daily climate data to BUFR sequence 307075

The format is intended for use with Climate Data Management Systems to publish data on WIS2

Requirement for daily climate observations to monitor extremes

Daily observations of:

- Minimum, maximum and average temperature over 24 hours period
- Total accumulated precipitation over 24 hours period
- Total snow depth at time of observation
- Depth of fresh snow over 24 hours period

Recognition of different reporting practices by Members, explicit reporting of 24 hours period used

Additional metadata: method of calculating average temperature; sensor and station heights; exposure and measurement quality classification

Template = AWS in the Plugin Configuration

wis2box data plugins

wis2box data plugins use the BUFR tools to enable data transformation prior to publication

- **csv2bufr** enables any system to prepare a data-extract without needing local BUFR conversion tools
- **synop2bufr** enables direct publication of FM-12 synop reports from manual observers
