

# WIS2 Operation Model & the role of GISCs in WIS2

# Overview

- Introduction
- Support for AoR / Transition
- WIS2 Node Assessment
- Monitoring Events
- GISC Watch

# Introduction

**Three type of WIS Centres are defined: NCs, DCPCs and GISCs**

NCs and DCPCs are affiliated with a Global Information System Centre (GISC)

*As of the operational phase of WIS2 in 2025, the role of WIS Centres has evolved*

- **NCs and DCPCs operate WIS2 Nodes to share their data**
  
- **Global Information System Centres (GISCs):**
  - ✓ **Support NCs and DCPCs** to establish their data sharing on WIS2
  - ✓ Perform **WIS2 Node Assessment** prior to WIS2 Node registration in Global Registry
  - ✓ **Ensure the smooth operation of data exchange in WIS2**, using the Global Monitoring tools and participating in the GISC Watch

For Designation Procedures for WIS Centres see:  
[Manual on WIS, Volume I, Part II, Page 16](#)

**For list of current NC/DCPC and affiliated GISC see:**  
<https://community.wmo.int/en/wis-centres>

# Support for AoR / Transition

1. GISCs are supporting their AoR in the transition
  - **Training**
    - GISCs provide training and expertise in various areas
  - Need help?
    - Contact your GISC. GISCs are your first contact point
  - Miss something? / Data not available? / Other operational issues?
    - GISCs can provide further contact points or guidance
2. Provide services depending on GISC
  - WIS portal
  - Cloud infrastructure
  - ...
3. Help with data sharing / reception on WIS2
  - GTS data available?
  - What is the correct topic?
  - How to provide good metadata

# WIS2 Node Assessment

When you register your WIS2 Node, the WIS2 compliance is assessed

The principal GISC verifies that the WIS2 Node is compliant with WIS2 requirements. This assessment includes:

- Verification of **compliance of the topics used by the centre** with the WTH specification;
- Verification of **compliance of the notification messages** with the WIS2 Notification Message (WNM) specification;
- Verification that the **data server** is correctly configured and **properly functioning**;
- Verification that the **Message Broker** is correctly configured and **properly functioning**.

# Monitoring Events

- Each global service (and sensor centers) export **Monitoring Metrics** for the **Global Monitor**
  - Openmetrics format
- In addition to WMCP and WNM there are **alert messages** defined (WEM)
  - Can be seen as successor of NOXX
  - WIS2 Nodes and global services can inform about issues

# Monitoring Events

- <https://wmo-im.github.io/wis2-monitoring-events/standard/wis2-monitoring-events-DRAFT.html>
- Messages from Global Services
  - *Global Service service down*
  - *Global Service malfunctioning*
  - *WIS2 Node malfunctioning*
  - planned/expected outages
  - ...

- Example topic:

- `monitor/a/wis2/de-dwd`

# Monitoring Events

Property	Requirement	Description
id	Required	A universally unique identifier (UUID) of the message (see <a href="#">Identifier</a> )
specversion	Required	The CloudEvents specification version (see <a href="#">Version</a> )
source	Required	The centre identifier producing the event (see <a href="#">Source</a> )
type	Required	The event type related to the message (see <a href="#">Type</a> )
subject	Required	The centre identifier of the subject of the event (see <a href="#">Subject</a> )
time	Required	The date and time of when the notification was published, in RFC3339 format, UTC (see <a href="#">Time</a> )
datacontenttype	Required	The media type of the data content encoding in the event message ( <code>application/json</code> ) (see <a href="#">Data content type</a> )
data	Required	The event payload as JSON (see <a href="#">Data</a> )

# Monitoring Events

```
{
  "specversion": "1.0",
  "type": "int.wmo.wis.wme.event.report.notice",
  "source": "ar-smn",
  "subject": "ar-smn",
  "id": "6da24af0-b19f-4106-b583-73cc25a4435d",
  "time": "2025-08-02T02:43:35Z",
  "datacontenttype": "application/json",
  "dataschema": "https://schemas.wmo.int/wme/1.0.0/schemas/wis2-event-message-encoding-report.json",
  "data": {
    "type": "wmem:report",
    "title": "Data outage notice",
    "detail": "Surface synoptic observations will be missing until 22 July 2025, 09:00Z",
    "channel": "origin/a/wis2/ar-smn/data/core/weather/surface-based-observations/synop",
    "time": {
      "interval": [
        "..",
        "2025-07-25T09:00:00Z"
      ]
    },
    "wmem:severity": "info"
  }
}
```

# GISC Watch

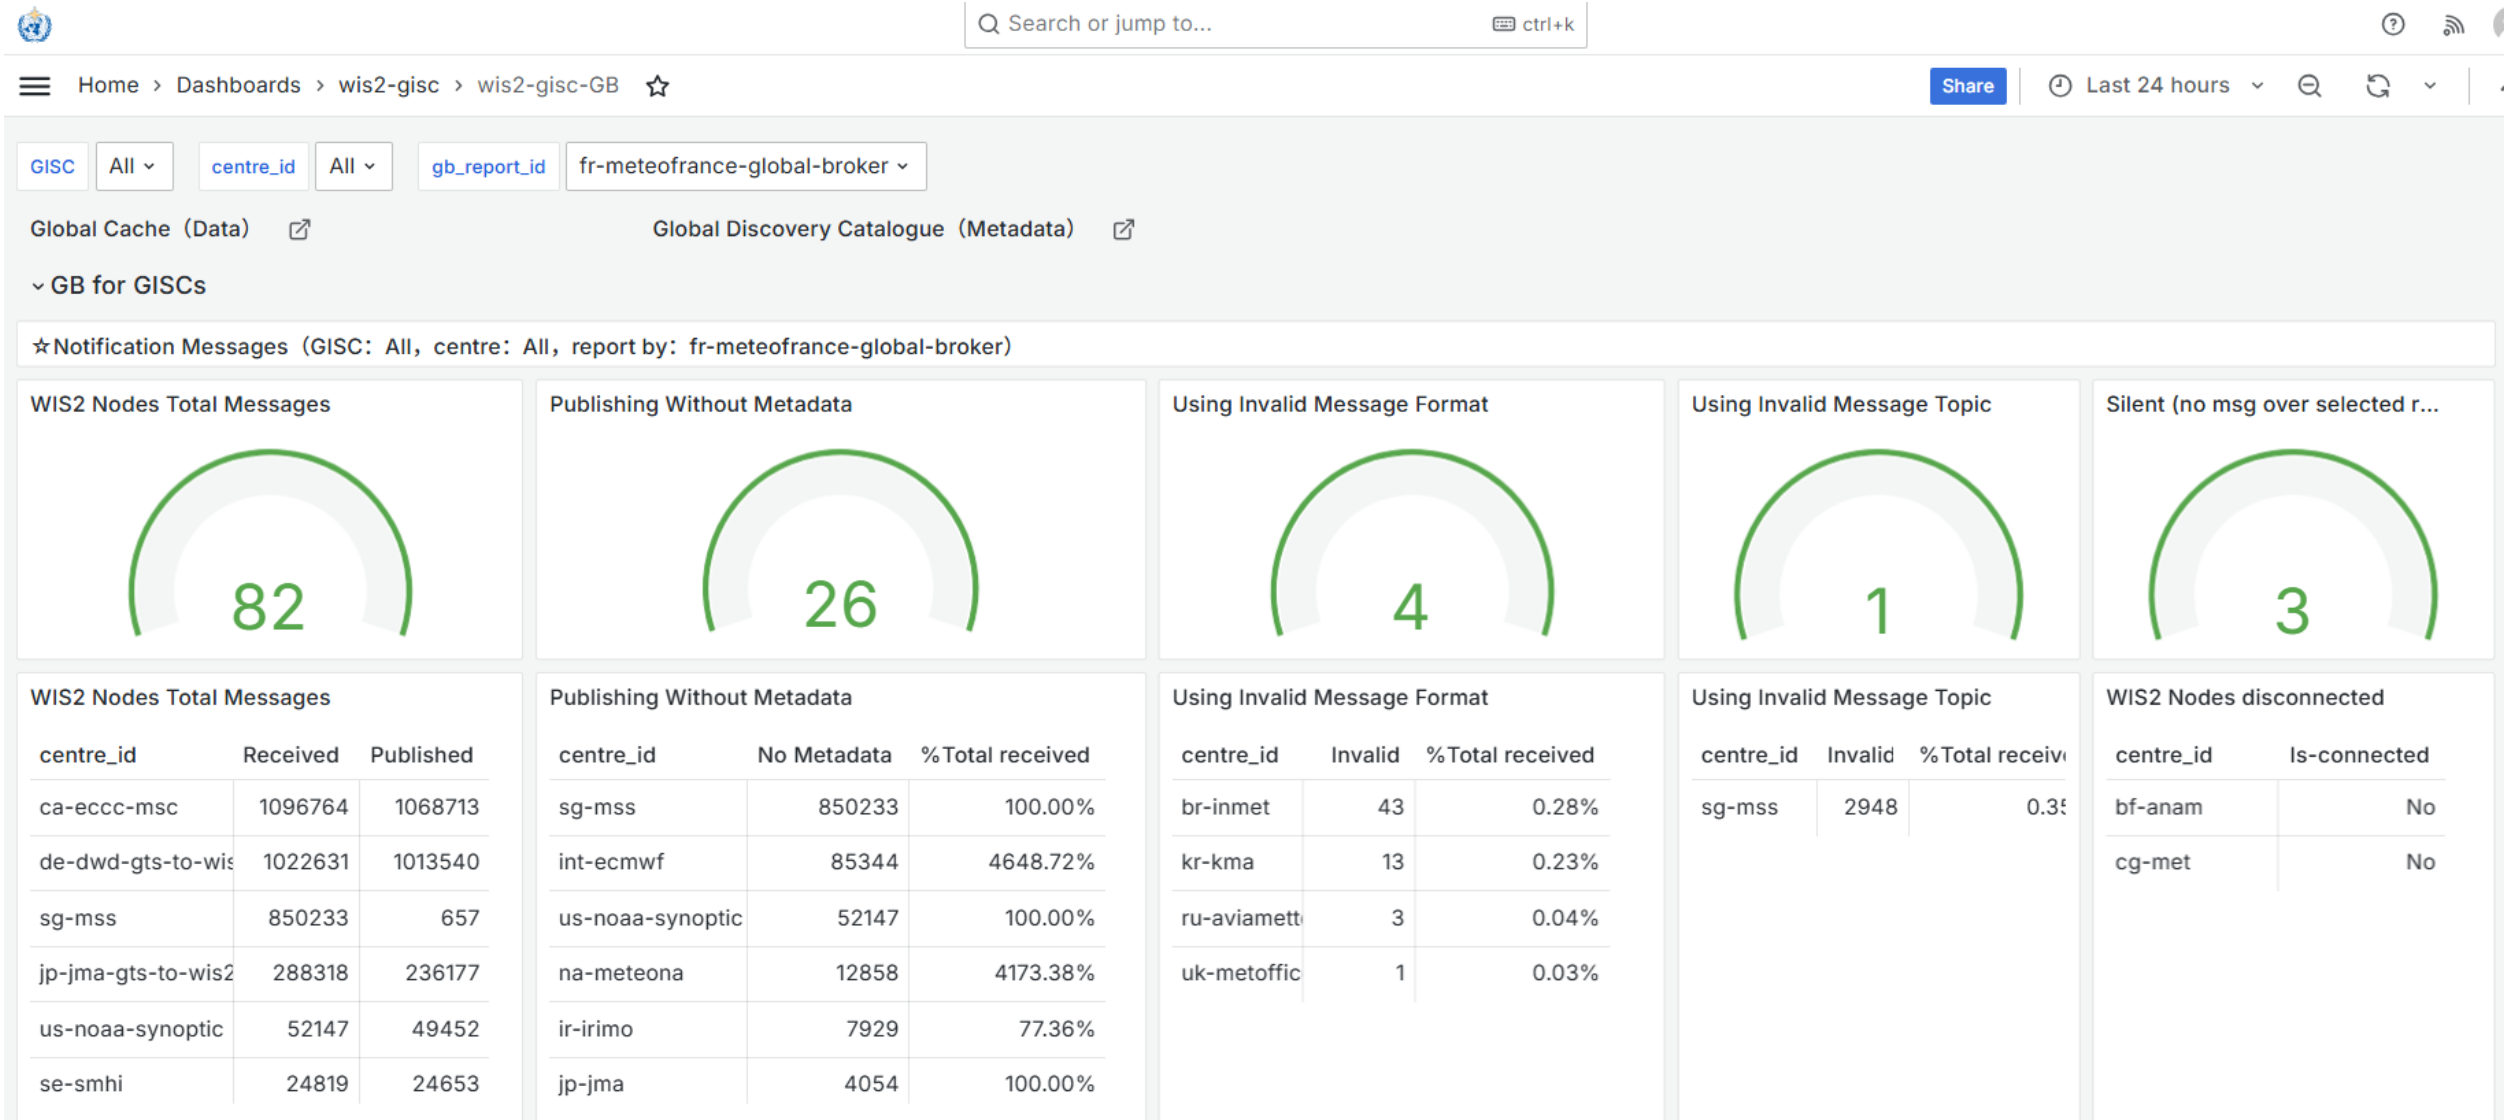

1	Organization	The root of the monitoring metrics is set fixed to [wmo]
2	Program	wmo program for which the metrics apply. WIS 2 related metrics are set to [wis2]
3	Service	Name of the service / data feed

 wmo/wis2/gc	Add definition for label naming
 gb.csv	Initial definition of the first levels of the hierarchy
 gc.csv	Initial definition of the first levels of the hierarchy
 gdc.csv	Initial definition of the first levels of the hierarchy
 node.csv	Initial definition of the first levels of the hierarchy
 organization.csv	Initial definition of the first levels of the hierarchy
 program.csv	Initial definition of the first levels of the hierarchy
 sensor.csv	Initial definition of the first levels of the hierarchy
 wis2.csv	Initial definition of the first levels of the hierarchy

```

# GISC Watch

**Global Monitoring** provides dashboards for GISCs to monitor WIS2 Operations:

# GISC Watch

New GISC Watch monitoring procedure launched in April 2025

- replacing the WIS1 Watch, which had been active from 2017 through 2024

New version of GISC Watch Guide (under development) adapting procedures originally developed for WIS1 to WIS2

GISC Watch follows-up on issues using the WIS2 Incident Management System

The screenshot displays the WIS2 IMS interface. The top navigation bar includes 'Dashboards', 'Projects', 'Issues', 'Boards', and 'Create'. The left sidebar shows 'WIS2 IMS' with options to 'Create board', 'Issues', 'Reports', 'Releases', and 'Components'. The main content area is titled 'All issues' and lists several issues. The selected issue, 'WI-78', is highlighted and its details are shown on the right. The details include the title 'GB USA - Messages missing', type 'Incident', priority 'Medium', and labels 'None'. The description states: 'It looks like there is no message on origin/a/wis2/# since lunchtime today on the US GB. The attached image shows the difference in terms of messages received. Can this be looked at?'.

Issue ID	Description
WI-82	No recommended data from GTS-to-WIS2 gateway DWD.
WI-81	All GBs have been unable to receive any messages from ...
WI-80	Daily archive of Canada's GDC is outdated
WI-79	update of WCMP2 records in GDC with valid time.resoluti...
WI-78	GB USA - Messages missing
WI-77	GISC and GB Brazil are disconnected
WI-76	DWD Gateway

# Summary

GISCs **support NCs and DCPCs** in their WIS2 implementation

GISCs perform **WIS2 Node assessment** prior to registration in the Global Registry

GISCs **continuously monitor WIS2 operations** using Global Monitoring dashboard and participate in GISC Watch to follow-up on issues

**New Expert Team in WIS2 “ET-WISOP” brings together all GISCs representatives to work consistently and coherently toward successfully implementing WIS 2.0**
